

Understanding your prescription drug options

What is a formulary?

A formulary, or preferred drug list, is a list of the medications that are covered under your prescription drug benefit. A committee of local doctors and pharmacists create these lists by evaluating medications based on their cost, effectiveness, and availability.

Prescription drug tiers

The amount you pay for a drug depends on the medication you buy and where it appears on your formulary. Your formulary is broken up into three tiers; your drug plan may cover medications on all three tiers, or you may only have coverage for tiers 1 and 2. Some drug plans also exclude certain drugs or drug classes. Please check your plan documents for information about your specific drug coverage.

To save money, your best option is to choose drugs that are on the first or second tier of your formulary. Drugs that are not on your formulary will cost a higher copay. Talk to your doctor before making a decision between generic and brand-name drugs.

How can I find out if my drug is on the formulary?

Visit our website, bcbswny.com. You can search for a specific drug by name, category, or by drug status (i.e., formulary, non-formulary, preauthorization required, etc.). For a hard-copy list of covered medications, you can print a copy from our website, or call us at the customer service number on the back of your member ID card.
