

Clinical Guideline: The Diagnosis, Evaluation, and Treatment of Attention-Deficit/Hyperactivity Disorder (ADHD) in Children and Adolescents

Line of Business: WV Medicaid and CHIP

Date of QI/UM Committee Review and Adoption: April 24, 2025

Changes for 2025

- Regarding "Follow-up Care for Children Prescribed ADHD Medication" Clinical Indicator:
- Added ADHD medications: dexmethylphenidate-serdexmethylphenidate and viloxazine.
- Clarified members should be 6 years of age at the start of intake to 12 years of age at the end of intake under initial population

This guideline does not replace the judgement or the role of the clinician in the decision-making process for individual patients and is only intended to serve as an educational resource for the delivery of care.

Tot marriadat patients and is only into	for individual patients and is only intended to serve as an educational resource for the delivery of care.		
Clinical Indicators	Description of the Indicator		
1. Follow-up Care for Children Prescribed ADHD Medication – Initiation Phase (Source: HEDIS® Measurement Year (MY) 2025, Vol. 2, Technical Specifications, ADD-E)	The percentage of children newly prescribed attentiondeficit/hyperactivity disorder (ADHD) medication who had at least three follow-up care visits within a 10-month period, one of which was within 30 days of when the first ADHD medication was dispensed. Two rates are reported: Initiation Phase and Continuation and Management (C&M) Phase. • Initiation Phase: The percentage of members 6– 12 years of age with a prescription dispensed for ADHD medication, who had one follow-up visit with a practitioner with prescribing authority during the 30-day Initiation Phase. • Continuation and Maintenance (C&M) Phase. The percentage of members 6–12 years of age with a prescription dispensed for ADHD medication, who remained on the medication for at least 210 days and who, in addition to the visit in the initiation phase, had at least two follow-up visits with a practitioner within 270 days (9 months) after the initiation phase ended.

Clinical Guideline: Adult Preventative Guidelines (21 & Over)

Line of Business: WV Medicaid and CHIP

Date of QI/UM Committee Review and Adoption: April 24, 2025

Changes for 2025

- Updated the measure title from Chlamydia Screening in Women to Chlamydia Screening
- Replaced references to "women" with "members recommended for routine chlamydia screening."
- Added criteria for "members recommended for routine chlamydia screening" to the eligible population
- U.S. Preventive Services Task Force Final Recommendations Statement Breast Cancer: Screening has been updated for 2024
- Removed Centers for Disease Control and Prevention Promoting Health for Adults (2022) as the reference is no longer published

This guideline does not replace the judgement or the role of the clinician in the decision-making process for individual patients, and it is only intended to serve as an educational resource for the delivery of care.

Clinical Indicators	Description of the Indicator
1. Breast Cancer Screening (Source: HEDIS® Measurement Year (MY) 2025, Vol. 2, Technical Specifications - BCS-E)	The percentage of members 50–74 years of age who were recommended for routine breast cancer screening and had a mammogram to screen for breast cancer.
2. Cervical Cancer Screening (Source: HEDIS® Measurement Year (MY) 2025, Vol. 2, Technical Specifications - CCS-E)	The percentage of members 21–64 years of age who were recommended for routine cervical cancer screening who were screened for cervical cancer using any of the following criteria: • Members 21–64 years of age who were recommended for routine cervical cancer screening and had cervical cytology performed within the last 3 years. • Members 30–64 years of age who were recommended for routine cervical cancer screening and had cervical high-risk human papillomavirus (hrHPV) testing performed within the last 5 years. • Members 30–64 years of age who were recommended for routine cervical cancer screening and had cervical cytology/high-risk human papillomavirus (hrHPV) cotesting within the last 5 years.
3. Chlamydia Screening (Source: HEDIS® Measurement Year (MY) 2025, Vol. 2, Technical Specifications - CHL-E)	The percentage of members 16-24 years of age who were identified as sexually active and who had at least one test for chlamydia during the measurement year. Members recommended for routine chlamydia screening 16–24 years as of December 31 of the measurement year. Two age stratifications and a total rate are reported: • 16-20 years • 21-24 years • Total
4. Adults' Access to Preventive/Ambulatory	The percentage of members 20 years and older as of December 31 who had an ambulatory or preventive care visit.

Health Services (Source: HEDIS® Measurement Year (MY) 2025, Vol. 2, Technical Specifications – AAP)	 Medicaid members who had an ambulatory or preventive care visit during the measurement year. Three age stratifications and a total rate are reported: • 20-44 years • 45-64 years • 65 years and older • Total The total is the sum of the age stratifications

Clinical Guideline: The Management of Diabetes

Line of Business: WV Medicaid and CHIP

Date of QI/UM Committee Review and Adoption: April 24, 2025

Updates for 2025

- Addition of Kidney Health Evaluation for Diabetes Patients to Clinical Indicators
- Addition of resource regarding Kidney Health Evaluation for the Diabetic Patient

This guideline does not replace the judgement or role of the clinician in the decision-making process for individual patients and is intended as an educational resource for the delivery of care.

	T
Clinical Indicators	Description of Indicator
1. Glycemic Status Assessment for Patients With Diabetes (Source: HEDIS® Measurement Year (MY) 2025, Vol. 2, Technical Specifications, GSD)	The percentage of members 18–75 years of age with diabetes (types 1 and 2) whose most recent glycemic status (hemoglobin A1c [HbA1c] or glucose management indicator [GMI]) was at the following levels during the measurement year: • Glycemic Status <8.0% • Glycemic Status >9.0%. Note: Organizations must use the same data collection method (Administrative or Hybrid) to report these indicators.
2.Eye Exam for Patients with Diabetes (Source: HEDIS® Measurement Year (MY) 2025, Vol. 2, Technical Specifications, EED)	The percentage of members 18–75 years of age with diabetes (type 1 and type 2) who had a retinal eye exam performed.
3.Blood Pressure Control for Patients with Diabetes (Source: HEDIS® Measurement Year (MY) 2025, Vol. 2, Technical Specifications, BPD)	The percentage of members 18–75 years of age with diabetes (types 1 and 2) whose blood pressure (BP) was adequately controlled (<140/90 mm Hg) during the measurement year.
4.Statin Therapy for Patients with Diabetes (Source: HEDIS® Measurement Year (MY) 2025, Vol. 2, Technical Specifications, SPD)	The percentage of members 40-75 years of age during the measurement year with diabetes who do not have clinical atherosclerotic cardiovascular disease (ASCVD) who met the following criteria. Two rates are reported: 1. Received Statin Therapy. Members who were dispensed at least one statin medication of any intensity during the measurement year. 2. Statin Adherence 80%. Members who remained on a statin medication of an intensity for at least 80% of the treatment period.
5. Kidney Health Evaluation for Patients with Diabetes (Source: HEDIS Measurement Year 2025,	The percentage of members 18–85 years of age with diabetes (type 1 and type 2) who received a kidney health evaluation defined by and estimated glomerular filtration rate (eGFR) <i>and</i> a urine albumin-creatinine ratio (uACR), during the measurement year.

Child and Adolescent Immunization

Changes for 2025

Childhood Immunization Status retired for MY 2025, Immunizations for adolescents discontinued for MY 2025

The guideline does not replace the judgement or role of the clinician in the decision-making process for individual patients and is intended as an educational resource for the delivery of care.

Clinical Indicators	Description of Indicator
1. Childhood Immunization	The percentage of children 2 years of age who had four diphtheria,
Status (Source: HEDIS®	tetanus and acellular pertussis (DTaP); three polio (IPV); one measles,
Measurement Year 2023	mumps and rubella (MMR); three haemophilus influenza type B (HiB);
Technical Specifications - CIS)	three hepatitis B (HepB), one chicken pox (VZV); four pneumococcal
,	conjugate (PCV); one hepatitis A (HepA); two or three rotavirus (RV); and
	two influenza (flu) vaccines by their second birthday. The measure
	calculates a rate for each vaccine and three combination rates.
2. Immunizations for	The percentage of adolescents 13 years of age who had one dose of
Adolescents (Source: HEDIS®	meningococcal vaccine, one tetanus, diphtheria toxoids and acellular
Measurement Year (MY) 2023	pertussis (tDap) vaccine, and have completed the human
Technical Specifications – IMA)	papillomavirus (HPV) vaccine series by their 13 th birthday. The measure
,	calculates a rate for each vaccine and two combination rates.
3. West Virgina EPDST	EPSDT follows the CDC and ACIP Guidelines
Periodicity schedule	• EPSDT tracks all HEDIS Measures, and School Vaccine Requirements
	from age's birth through 20 years.
4. West Virginia Department of	KINDERGARDEN (all grade school students)
Health and Human Services	
School Requirements - School	• 4 doses of tetanus, diphtheria, and acellular pertussis* (1 dose after
Vaccination Requirements	the 4th birthday)
	3 doses of polio (one dose after 4th birthday)
	• 2 doses of measles, mumps, rubella (MMR) with first dose after the 1st
	birthday
	• 3 doses of hepatitis B
	• 2 doses of varicella, with first dose occurring after the 1st birthday
	*Usually given as DTP or DTaP or DT or Td
	*Those excused from the Pertussis vaccine should receive the DT
	vaccine
	FOR ATTENDANCE IN 7TH GRADE: In addition to all other required grade
	school immunizations:
	• 1 dose of tetanus, diphtheria, acellular pertussis (Tdap) on the first
	day of 7th grade.
	• 1 dose of meningococcal conjugate vaccine (MCV) on the first day of
	7th grade. Note: If a child gains entrance to school in any succeeding
	year, the same immunizations are required on the first day.

	FOR ATTENDANCE IN 12TH GRADE: In addition to all other required
	grade school immunizations:
	One dose of meningococcal conjugate vaccine (MCV) on the first day
	of 12 th grade. If one dose was given at 16 years of age or older, that shall
	count as the 12 th grade dose.

Handling of Elevated Blood Lead Levels

This guideline does not replace the role or judgement of the clinician in the decision-making

process for individual patients and is intended as an educational resource for the delivery of care.	
Clinical Indicators	Description of Clinical Indicators
1. State Regulatory	• Children who have a blood lead level of ≥3.5µg/dL need to
Requirement EPSDT	receive follow up per Pennsylvania Guidelines.
	• Children who had an initial value ≥3.5µg/dL through capillary
	screening should have results confirmed with blood drawn by
	venipuncture. The CDC has a recommended schedule for
	obtaining a confirmatory venous sample. The higher the blood
	lead level on the capillary screening the more urgent the need for

confirmatory testing. • Children who had an initial value of ≥3.5µg/dL through venipuncture should follow the CDC guidelines for follow-up blood lead testing as frequency is based on initial blood lead level. • Siblings in the home should also receive lead testing, even if previous tests showed that their lead levels were within normal limits. • Children with a venous elevated blood lead levels should be referred to Early Intervention or DART for tracking services. This can be through the CONNECT Helpline at 1-800-692-7288 • Children with a venous elevated blood lead levels should receive additional developmental screenings by their PCP to ensure that the member is achieving developmental milestones • Children with a venous elevated blood lead level should be referred for an Environmental Lead Investigation on the first elevated venous lead level. **Reference Links**

- 1 First examination at the eruption of the first tooth and no later than 12 months. Repeat every 6 months or as indicated by child's risk status/susceptibility to disease. Includes assessment of pathology injuries.
- 2 By clinical examination.
- 3 Must be repeated regularly and frequently to maximize effectiveness.
- 4 Timing, types and frequency determined by child's history, clinical findings and susceptibility to oral disease.
- 5 Consider when systemic fluoride exposure is suboptimal. Up to at least 16 years.
- 6 Appropriate discussion and counseling should be an integral part of each visit for care.
- 7 Initially, responsibility of parent, as child matures, jointly with parent; then, when indicated, only child.
- 8 Every appointment, initially to discuss appropriate feeding practices, then the role of refined carbohydrates and frequency of snacking in caries development and childhood obesity. Monitor body mass index beginning at age two
- 9 At first, discuss the need for nonnutritive sucking: digits vs. pacifiers; then the need to wean from the habit before malocclusion or deleterious effect on the dentofacial complex occurs. For school-aged children and adolescent patients, counsel regarding any existing habits such as fingernail biting, clenching, or bruxism 10 Initially pacifiers, car seats, play objects, electric cords; secondhand smoke; when learning to walk; with sports and routine playing, including the importance of mouthguards; then motor vehicles and high-speed activities.
- 11 Observation for age-appropriate speech articulation and fluency as well as achieving receptive and expressive language milestones.
- 12 Identify: transverse, vertical, and sagittal growth patterns; asymmetry; occlusal disharmonies; functional status including temporomandibular joint dysfunction; esthetic influences on self-image and emotional development.
- 13 For caries susceptible primary molars, permanent molars, premolars, and anterior teeth with deep pits and fissures; placed as soon as possible after eruption.
- 14 Periodontal probing should be added to the risk-assessment process after the eruption of the first permanent molars

Clinical Guideline: Routine and High Risk Prenatal and Postpartum Care

Line of Business: WV Medicaid and CHIP

Date of QI/UM Committee Review and Adoption: April 24, 2025

Changes for 2025

- Removal of Cleveland Clinic Journal of Medicine, Maternal Asthma: Management Strategies (2017)
- Addition of CDC Immunization/Vaccination adult schedule (2024)
- Addition of the U.S. Preventative Task Force Final Recommendations Statement, Depression and Suicide Risk (2023)

This guideline does not replace the judgement or role of the clinician in the decision-making process for individual patients and is intended as an educational resource for the delivery of care

individual patients and is intended as an educational resource for the delivery of care		
Clinical Indicators	Description of Clinical Indicators	
1.Timeliness of Prenatal Care	The percentage of deliveries of live births on or between October	
(Source: HEDIS®	8 of the year prior to the measurement year and October 7 of the	
Measurement Year (MY) 2025,	measurement year. For these women, the measure assesses the

Clinical Guideline: Sickle Cell Disease

Line of Business: WV Medicaid and CHIP

Date of QI/UM Committee Review and Adoption: April 24, 2025

Changes for 2025

No changes for 2025

This guideline does not replace the judgement or role of the clinician in the decision-making process for the individual patient and is intended as an educational resource in the delivery of care.

Clinical Indicators	Description of Clinical Indicators
Receipt of seasonal flu shot	Percentage of enrollees diagnosed with Sickle Cell disease who received the flu shot. (total and by race/ethnicity breakdown)
2.Receipt of meningococcal vaccination	Percentage of enrollees diagnosed with Sickle Cell disease who received the meningococcal vaccination (quadrivalent meningococcal conjugate vaccine) starting age 2-10 years, then every 5 years after)
3.Outpatient visit in the past	Percentage of enrollees diagnosed with Sickle Cell disease with
12 months	at least one outpatient visit in the past 12 months.
4.Retinal Exams	Percentage of enrollees diagnosed with Sickle Cell disease who received retinal eye exams.
5. ED visits for Pain	Percentage of enrollees diagnosed with Sickle Cell disease who
Management	had ED Visits for Pain Management.
6. Adherence to Antibiotic	Percentage of enrollees diagnosed with Sickle Cell disease who
Prophylaxis	are adherent with Antibiotic Prophylaxis.

Clinical Guideline: The Treatment of Patients with Substance Use Disorders

Line of Business: WV Medicaid and CHIP

Date of QI/UM Committee Review and Adoption: April 24, 2025

Changes for 2025

- Updated reference from the National Institute on Drug Abuse (NIDA) Principles of Drug Addiction and Treatment (2014) to the NIDA Principles of Drug Addiction and Treatment (2023)
- Addition of the American Medical Association Care for Substance Use Disorder (2024)
- Removal of Dartmouth-Hitchcock Unhealthy Alcohol and Drug Use (2021) due to unavailable link

This guideline does not replace the judgement or role of the clinician in the decision-making process for individual patients and is intended as an educational resource for the delivery of care.

Clinical Indicators	Description of Clinical Indicators
1.Initiation and Engagement of Alcohol and Other Drug Abuse or Dependence (AOD) Treatment (Source: HEDIS® Measurement Year (MY) 2025 Vol. 2, Technical Specifications, IET)	The percentage of new substance use disorder (SUD) episodes that result in treatment initiation and engagement. Two rates are reported: 1. Initiation of SUD Treatment. The percentage of new SUD episodes that result in treatment initiation through an inpatient SUD admission, outpatient visit, intensive outpatient encounter, partial hospitalization, telehealth visit or medication treatment within 14 days. 2. Engagement of SUD Treatment. The percentage of new SUD
	episodes that have evidence of treatment engagement within 34 days of initiation
2.Follow-Up After Emergency Department Visit for Substance Use (Source: HEDIS® Measurement Year (MY) 2025, Vol. 2, Technical Specifications, FUA)	The percentage of emergency department (ED) visits for members 13 years of age and older with a principal diagnosis of substance use disorder (SUD), or any diagnosis of drug overdose, for which there was follow-up. Two rates are reported:
*Adapted from an NCQA measure with financial support from the Office of the Assistant Secretary for Planning and Evaluation (ASPE) under Prime Contract No.	The percentage of ED visits for which the member received follow-up within 30 days of the ED visit (31 total days). The percentage of ED visits for which the member received follow-up within 7 days of the ED visit (8 total days)
HHSP23320100019WI/HHSP23337001T,	
in which NCQA was a subcontractor to Mathematica. Additional financial	
support was provided by the Substance	

Abuse and Mental Health Services	
Administration (SAMHSA).
